

# e-notify

Get Notified Anywhere  
and at Anytime

## We Understand The Problem

Courts and legal organizations witness immense activities regularly. There may be occasions such as case hearings, active sessions and/or court notices when direct presences are required. However, this process get complex as there are no measures currently in place to ensure that all stakeholders of a case hearing are present nonscheduled date and time.

**SIMPLE**

**FAST**

**ACCURATE**

## Our Solution

combines latest  
technology with good  
understanding and  
tons of innovation.

# Assisting all Involved In a Case Hearing

A case event or hearing involves different layers of people besides the main participants. Lack of timely presence for any of these could result in loss of time, errors and unnecessary expenditure. Participants in a case hearing could include,

**01 Core Case Participants**

**02 Assigned Judges**

**03 Cops**

**04 Witnesses**

**And more..!**

## Approach of SGS Technologie

Bridge the gap between the participants and the legal systems of all states across the United States. Courts can ensure that the participants are informed of scheduled hearings and more so that no last-minute delays are caused.

## **Our Solution Ensures All Are Informed in Advance About Case Hearings and Other Legal Procedures**

SGS Technologie brings to you a web application with which all persons who are parties to a Court case or a Court event can receive notice of cancellation or rescheduling, a reminder about an upcoming filing or payment deadline, information of billing, and/or any other notification or reminder associated with a court event or case.

Registered users of the app can get electronic notifications about the updates in a single-court or updates of all courts of the region. Our application will ensure that every legal participant receives relevant updates within schedules.

### Intuitive User Interface

All the features can be accessed with ease. The eNotify application is powerful and rich in features. It operates uniformly on any platform and enables fast along with easy access.

### ADA Compliance

The system fully complies with all ADA and WCAG 2.0 guidelines. Its features include text readers, organized layout and automated chat bots to help users navigate accurately.

### Identity Verification

The application will automatically verify the user details in the back end. Verification will take users to the next stage.

### Unlimited Subscriptions

Subscriptions can be made for updates on “n” number of cases. A different email or phone number can be used by users for subscribing to each case.

### Comprehensive View

The dashboards of each admin can be customized according to individual preferences. Such dashboards can get to know the total number of registered users and number of emails/texts sent as well as those that were not sent.

### User-Mapping

Admins can map cases with specific users and / or map users with specific cases. This can be useful for users with disabilities or people with less technical knowledge.

### Targeted Messages

The app's admins can schedule message delivery to targeted groups whenever required. These messages can be on a commonly customized template or on specially customized templates for each court.

### Identity Verification

Admin can view reports per county, drill-down reports and reports of bounced contacts. Reports per county indicate the count of text / emails sent and/or failed, while drill-down reports indicate the count of texts/emails sent. Reports can also be seen on the number of individuals who opt out of receiving notifications and other information.

**Our Solution Ensures all Are Informed in Advance About Case Hearings and Other Legal Procedures**

**Assisting all Involved In a Case Hearing**
